

AIM OF THE WORK

Attempt to apply to the Italian data
the analysis presented in:

- 1) *An Empirical Site-Classification Method for Strong-Motion Stations in Japan Using H/V Response Spectral Ratio.*

Zhao, Irikura, Zhang, Fukushima, Somerville, Asano, Ohno, Oouchi etc..
2006 BSSA Vol 96/3 (914 - 925)

- 2) *Site Classification using horizontal-to-vertical Response Spectral Ratios and its impact when deriving empirical ground-motion prediction equations.*

Fukushima, Bonilla, Scotti, Douglas
2007 JEE Vol 11 (712-724)

SITE CLASSIFICATION

STATE OF THE ART

Based on PREDOMINANT PERIOD of H/V SA ratios

ZHAO et al. (2006)

JAPAN ROAD ASSOCIATION

CAT.	PERIOD T (sec)
SCI	$T < 0.2$
SCII	$0.2 \leq T < 0.4$
SCIII	$0.4 \leq T < 0.6$
SCIV	$T \geq 0.6$

AUTOMATIC CLASSIFICATION
SITE CLASSIFICATION INDEX (SI)

FUKUSHIMA et al. (2007)

CAT.

PERIOD T (sec)

SC1	$T < 0.2$
SC2	$0.2 \leq T < 0.6$
SC3	$T \geq 0.6$
SC4	Generic Rock
SC5	Generic Soil

AUTOMATIC CLASSIFICATION
MANUAL CONTROL

OUR APPLICATION

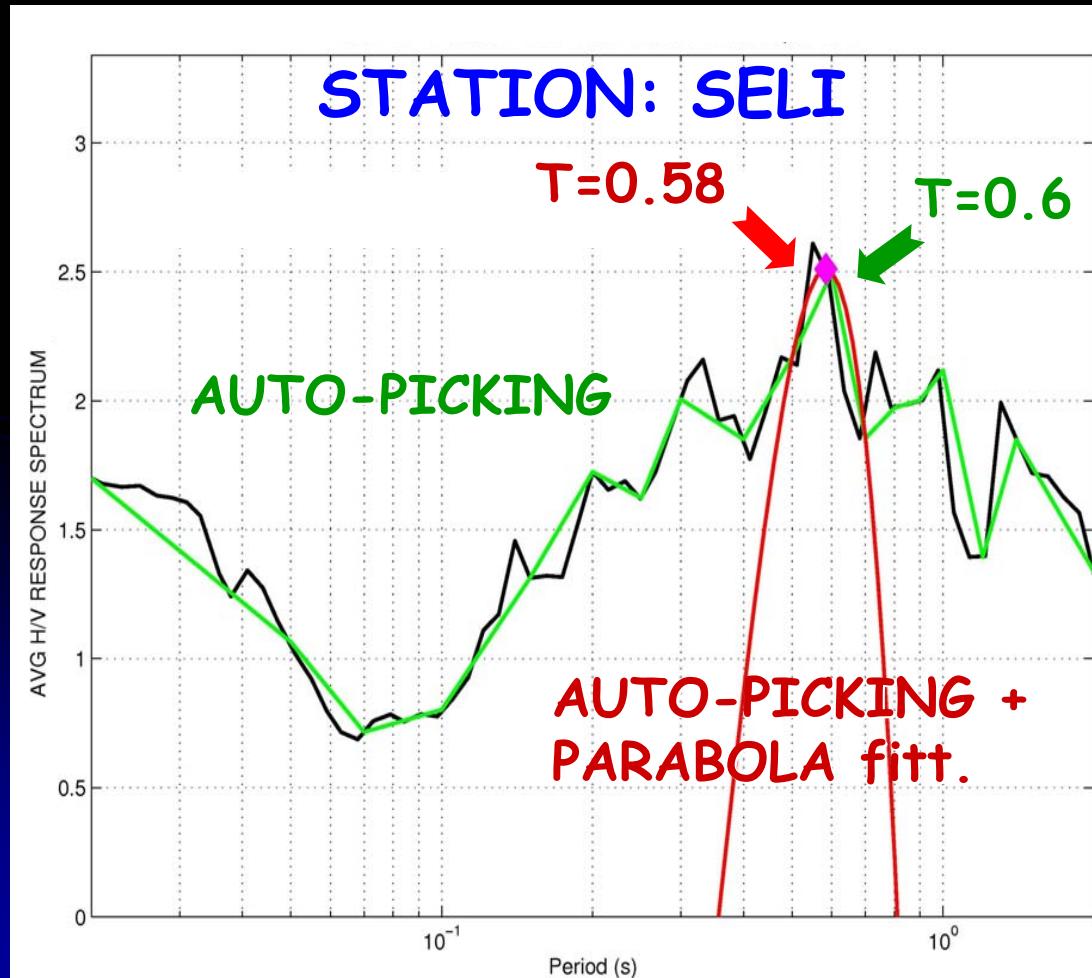

CAT.	PERIOD T (sec)
SCI	$T < 0.2$
SCII	$0.2 \leq T < 0.4$
SCIII	$0.4 \leq T < 0.6$
SCIV	$T \geq 0.6$
SCV	T unknown & orig. AB site
SCVI	T unknown & orig. CD site
SCVII	Unknown

SITE CLASSIFICATION

AUTO-PICKING - RESULTS

Peak of a quadratic function fitted
to 3 spectral points around the peak

AUTO-PICKING
 $T = 0.6 \text{ sec}$

CAT. FUKUSHIMA: SC3
CAT. ZHAO: SCIV

**AUTO-PICKING +
PARABOLA fitt.**
 $T = 0.58 \text{ sec}$

CAT. FUKUSHIMA: SC2
CAT. ZHAO: SCIII

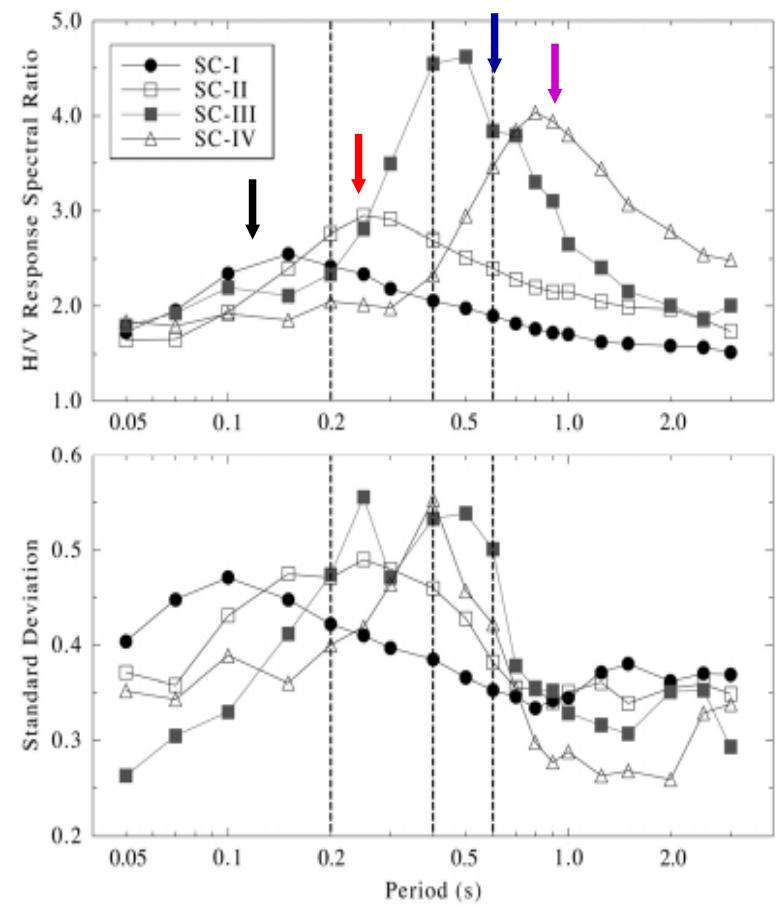

**FINAL VISUAL
INSPECTION**

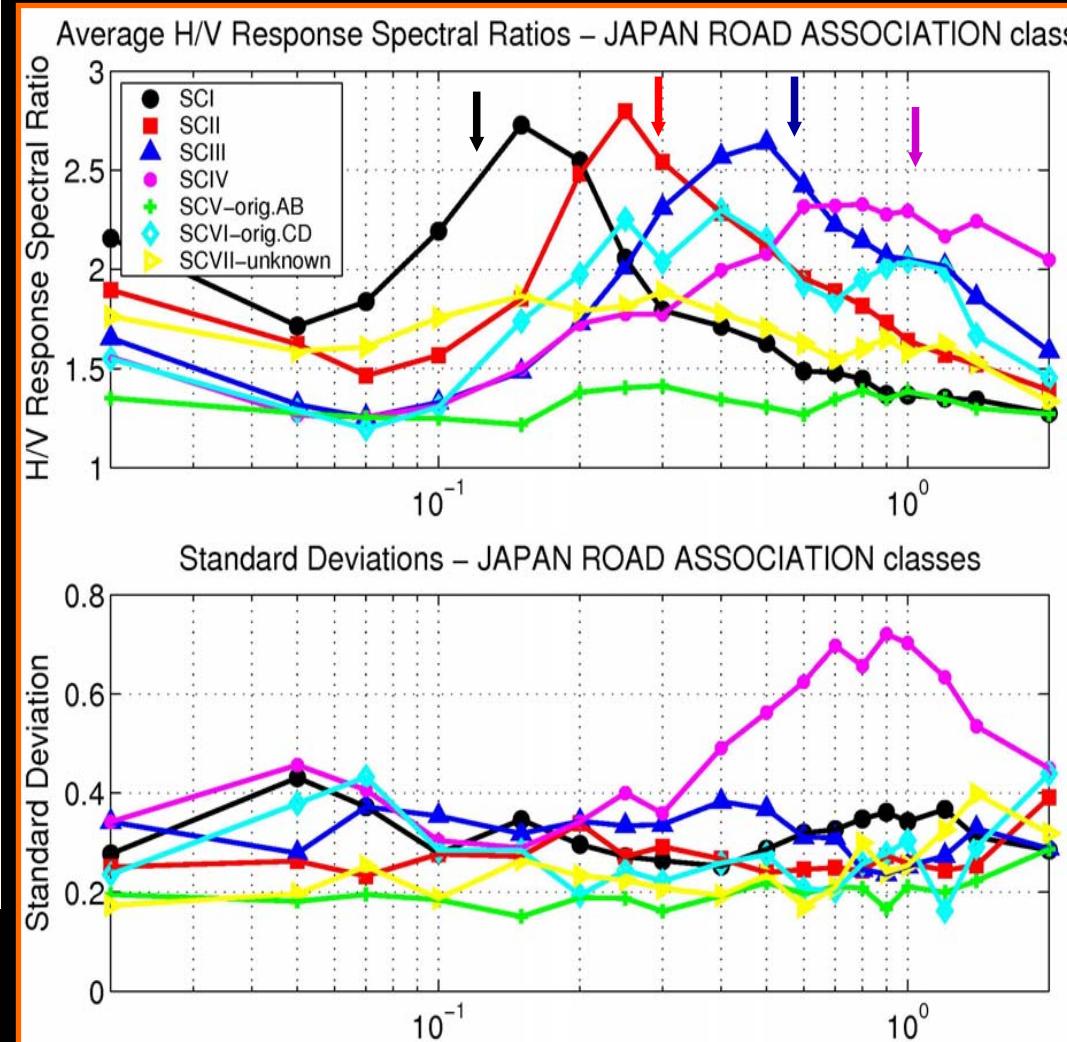

SITE CLASSIFICATION

RESULTS

ZHAO et al. (2007) CATEGORIES

Average H/V response spectral ratio for the ZHAO et al. (2006) site classes (top) and standard deviation for each class (bottom) in natural logarithms.

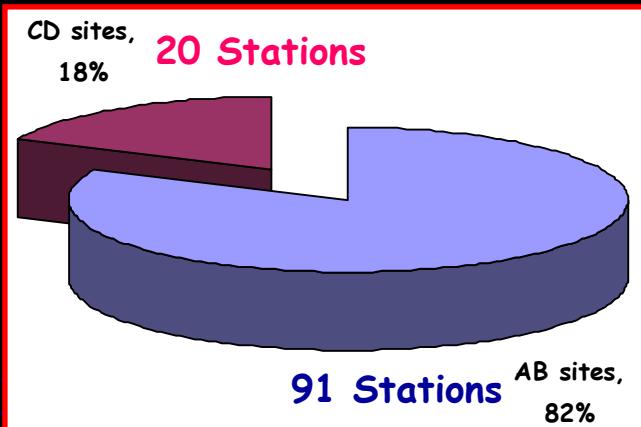

SITE CLASSIFICATION

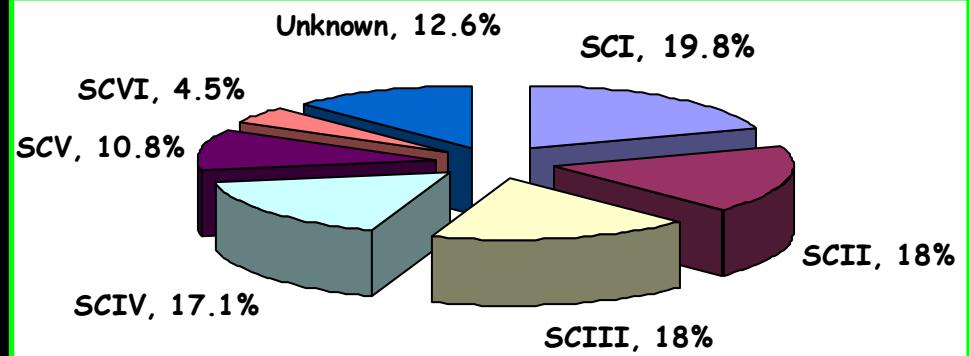

RESULTS - STATISTICS

ORIGINAL SITE CATEGORIES

EXPECTED AMPLIFICATION

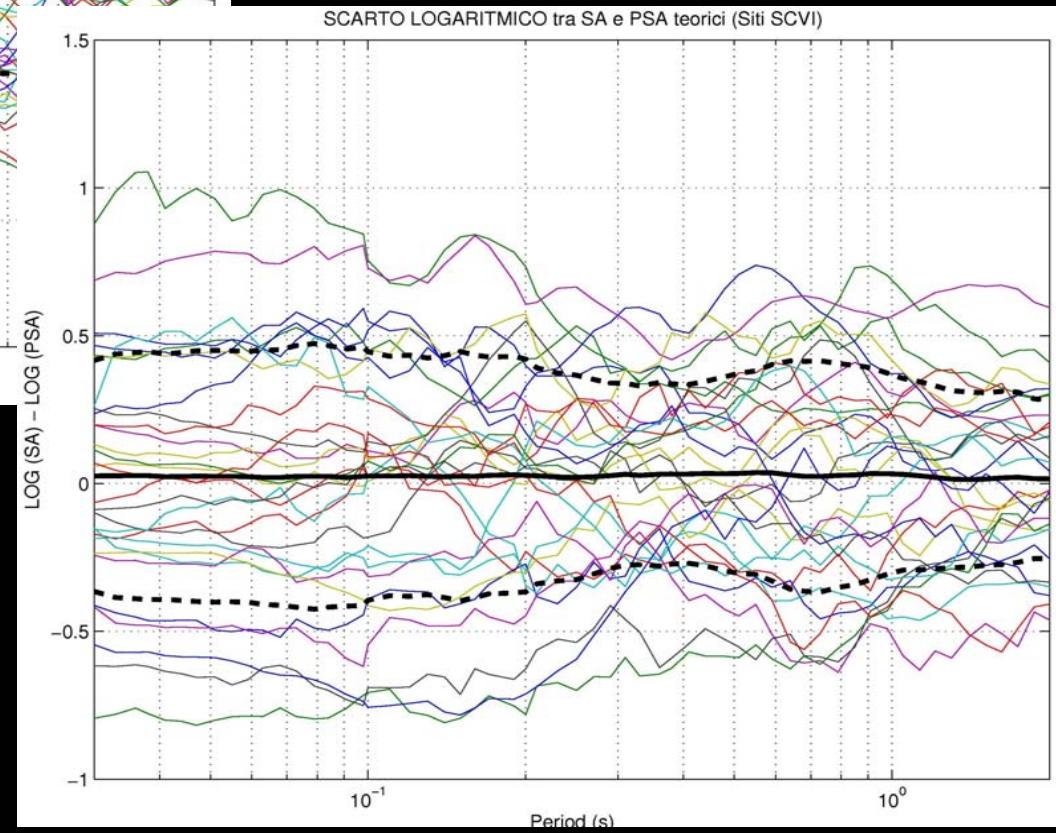

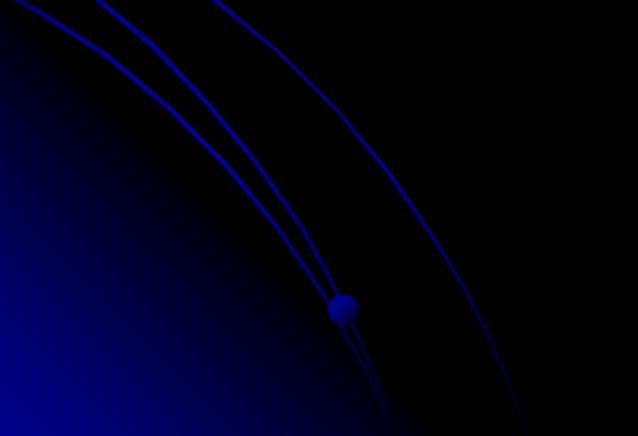

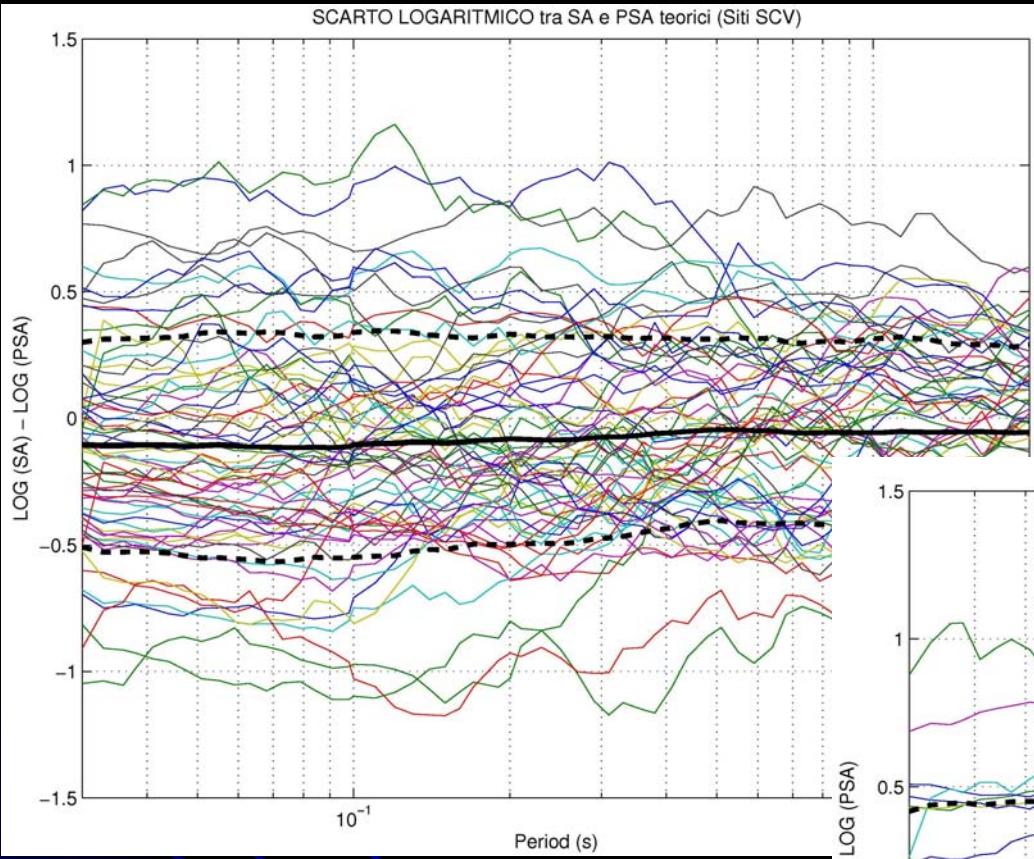

EXPECTED AMPLIFICATION

EXPECTED AMPLIFICATION

Can the H/V spectral ratio be used as a site transfer function?

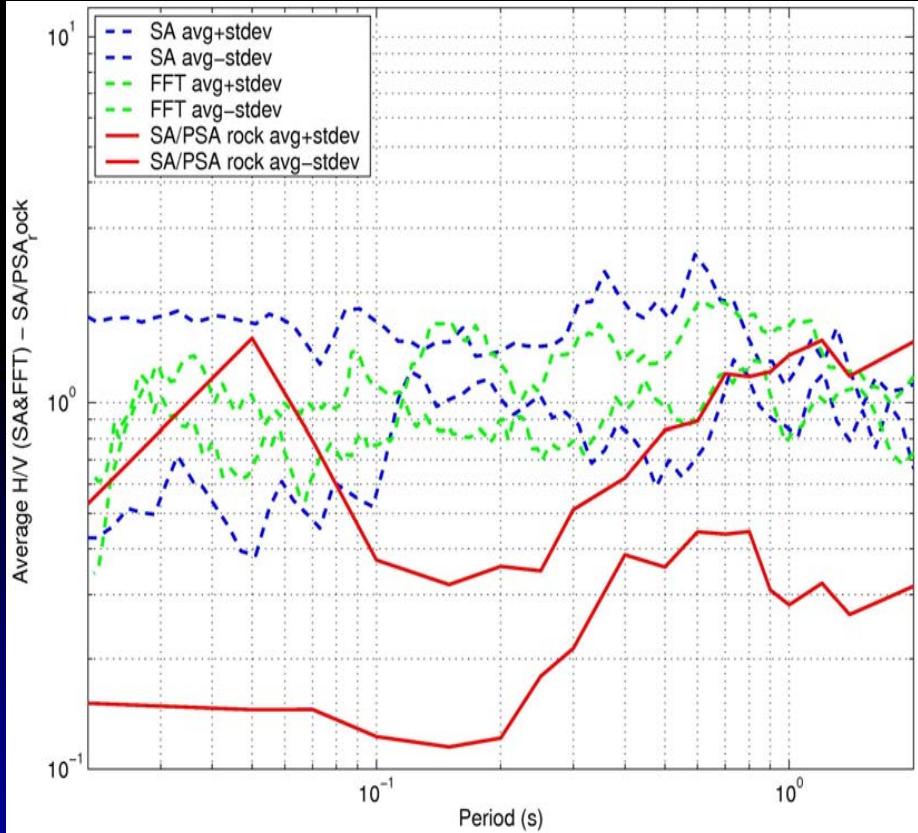

In the practice, HVSR is often used (and sometime probably misused) as an estimate of the site response.

Nobody knows to what extent this is correct since the identity is not demonstrated theoretically.

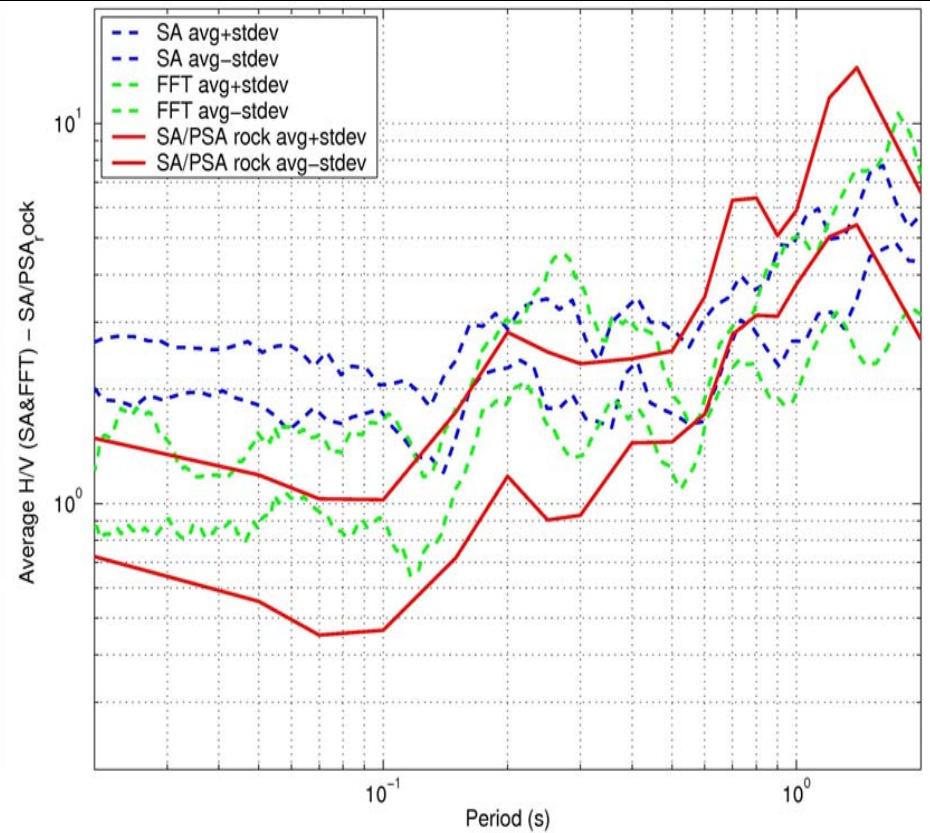

The aim of the work is to use the Italian strong motion data bank to infer quantitative indications on related uncertainties.

EXPECTED AMPLIFICATION vs H/V

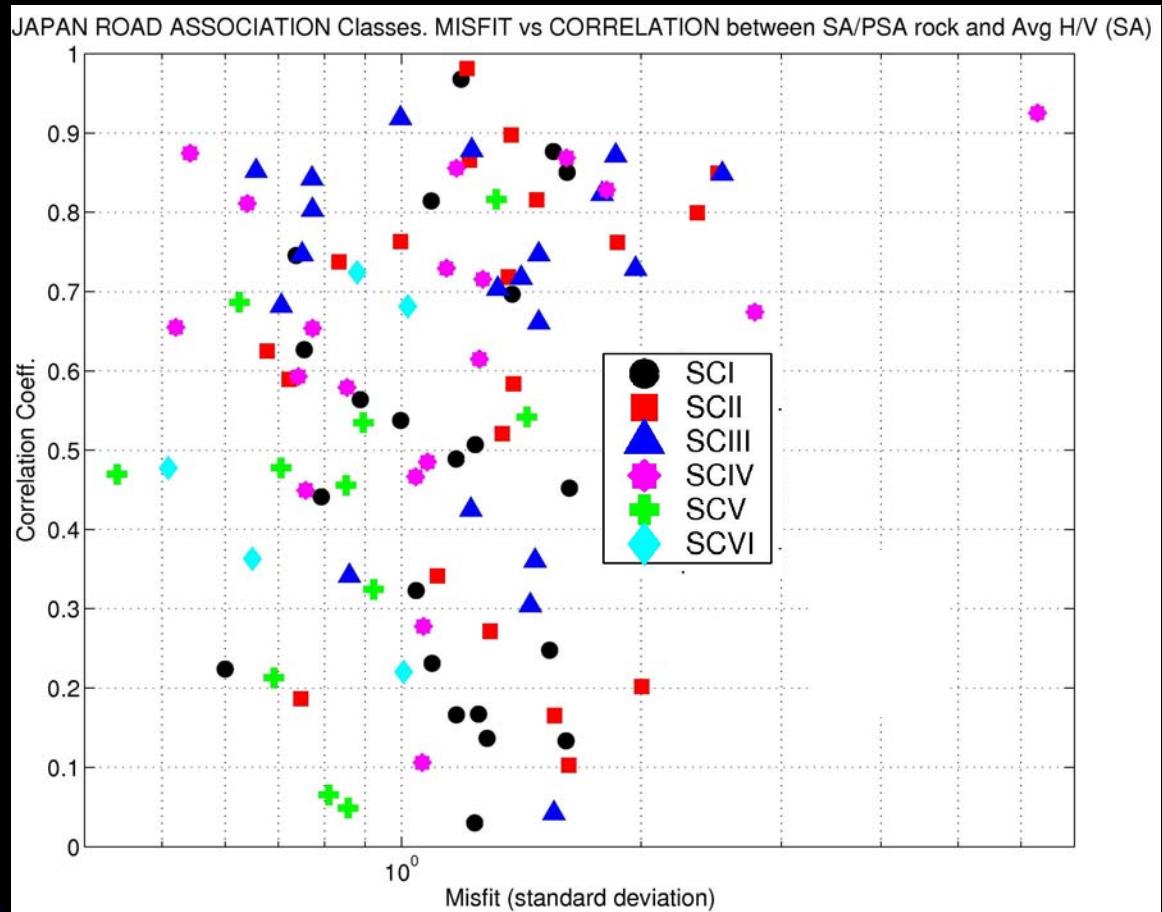

POOR AGREEMENT

GOOD FIT

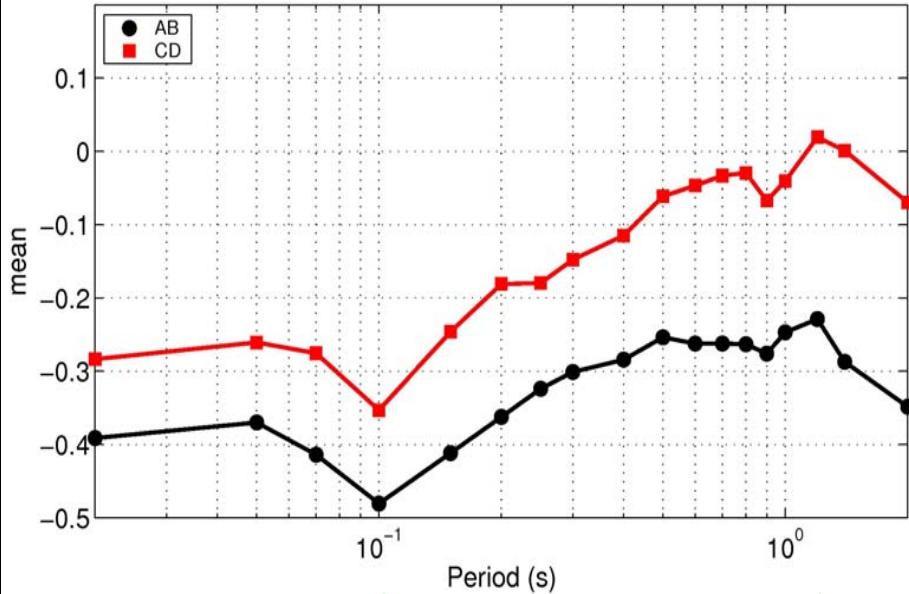

CAT.	PERIOD T (sec)
SCI	$T < 0.2$
SCII	$0.2 \leq T < 0.4$
SCIII	$0.4 \leq T < 0.6$
SCIV	$T \geq 0.6$
SCV	T unknown & orig. AB site
SCVI	T unknown & orig. CD site
SCVII	Unknown

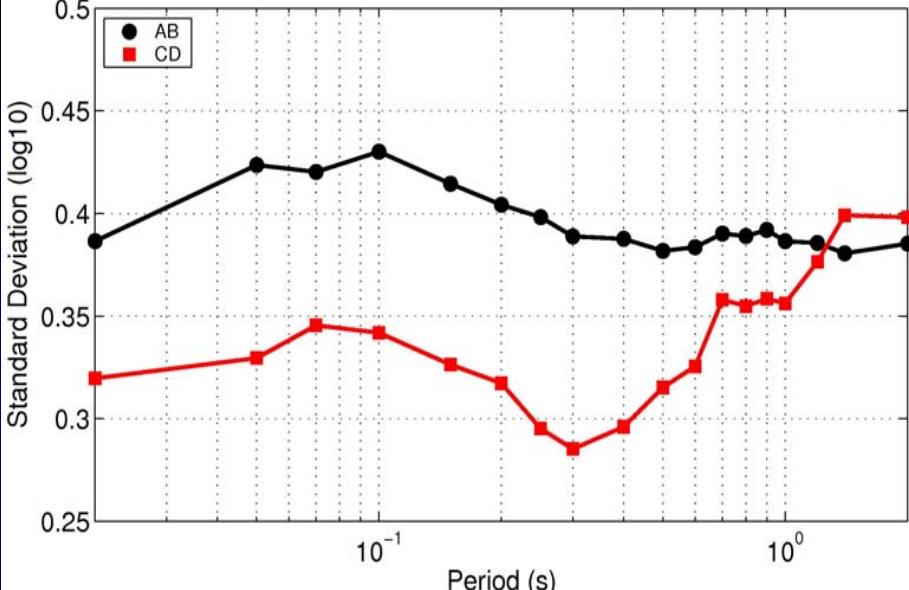

Can we use H/V as a proxy for transfer function?
